Computer & Electrical Engineering

Computer and electrical engineering inventions push the boundaries of what we can do with electronics. From robots to radars, computer and electrical engineering covers a wide range of electronic applications. Your cell phone keeps getting thinner, lighter, and faster thanks to advances within this field. You can even thank the engineers and inventors in this field for navigation systems and wireless internet.

Computer and electrical engineering is a fast-paced, exciting field and a hot spot where intellectual property protection is vital. Our patent practitioners servicing this area have academic and industry experience in electrical engineering, electronic engineering, computer engineering, and material science.
