Artificial Intelligence & Machine Learning

Our firm has extensive experience in preparing and prosecuting patents related to artificial intelligence (AI) and machine learning (ML). We have drafted and filed patent applications for clients in various domains, such as natural language processing, computer vision, speech recognition, materials, fabrication, medical devices, sensor processing, data analysis, and other specialized tasks. Our patent attorneys have diverse technical backgrounds and expertise in AI and ML, and they are well-versed in the latest patent laws and guidelines in this rapidly evolving field. We can help you protect your innovations and secure your competitive advantage in the AI and ML market, including the preparation and filing of patents directed to the consumer-facing AI/ML UX interfaces, the generation and selection of training data for training the AI/ML models, and the generation and utilization of the back-end AI/ML models.
